CORRELATION FOR TARGET 0

Points to be concluded from the graph presented before.

- Credit amount is inversely proportional to the date of birth, which means Credit amount is higher for low age and vice-versa.
- Credit amount is inversely proportional to the number of children client have, means Credit amount is higher for less children count client have and vice-versa.
- Income amount is inversely proportional to the number of children client have, means more income for less children client have and vice-versa.
- Less children client have in densely populated area.
- Credit amount is higher to densely populated area.
- The income is also higher in densely populated area.

CORRELATION OF TARGET 1

CORRELATION FOR TYPE I

This heat map for Target I is also having quite a same observation just like Target 0. But for few points are different. They are listed below.

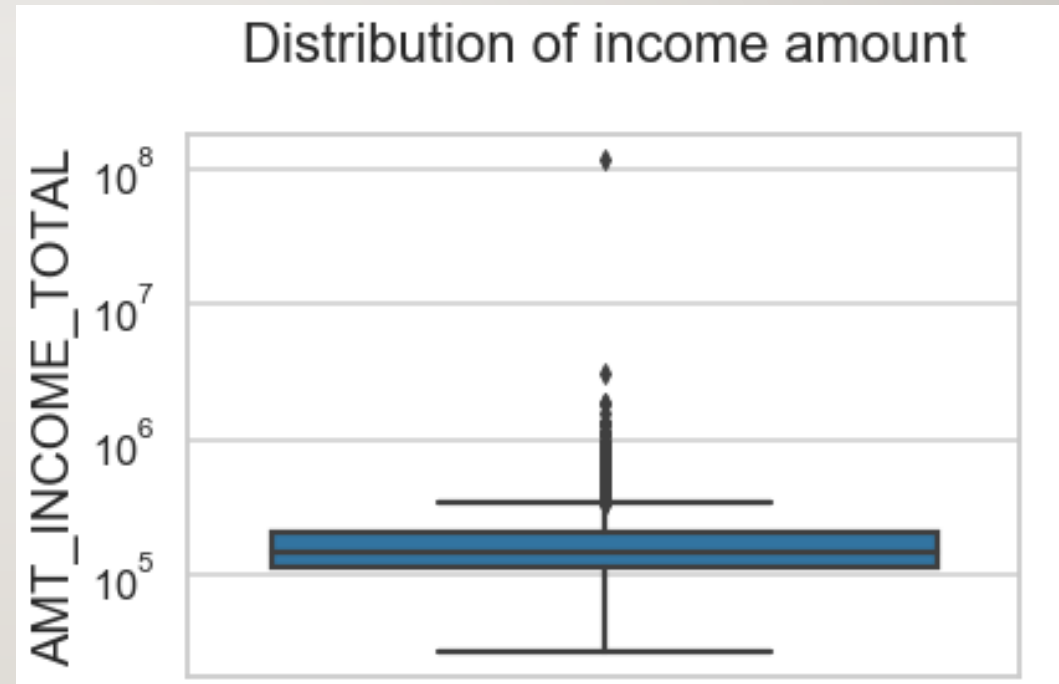

- The client's permanent address does not match contact address are having less children and vice-versa
- The client's permanent address does not match work address are having less children and vice-versa

CATEGORICAL UNIVARIATE ANALYSIS FOR VARIABLES TARGET 0

BOXPLOT FOR INCOME AMOUNT

Few points can be concluded from the graph.

- Some outliers are noticed in income amount.
- The third quartiles is very slim for income amount.

BOXPLOT FOR CREDIT AMOUNT

Few points can be concluded from the graph.

- Some outliers are noticed in credit amount.
- The first quartile is bigger than third quartile for credit amount which means most of the credits of clients are present in the first quartile.

BOXPLOT FOR ANNUITY AMOUNT

Few points can be concluded from the graph.

- Some outliers are noticed in annuity amount.
- The first quartile is bigger than third quartile for annuity amount which means most of the annuity clients are from first quartile.

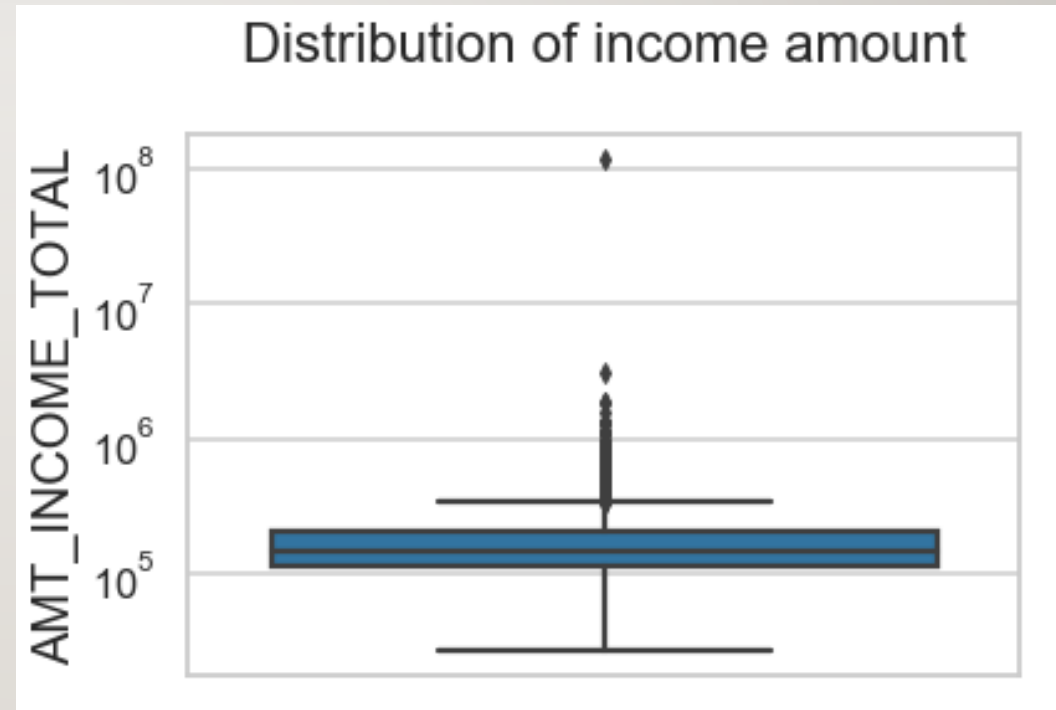

CATEGORICAL UNIVARIATE ANALYSIS FOR VARIABLES TARGET I

BOXPLOT FOR INCOME AMOUNT

Few points can be concluded from the graph.

- Some outliers are noticed in income amount.
- The third quartiles is very slim for income amount.
- Most of the clients of income are present in first quartile.

BOXPLOT FOR CREDIT AMOUNT

Few points can be concluded from the graph.

- Some outliers are noticed in credit amount.
- The first quartile is bigger than third quartile for credit amount which means most of the credits of clients are present in the first quartile.

BOXPLOT FOR ANNUITY AMOUNT

Few points can be concluded from the graph.

- Some outliers are noticed in annuity amount.
- The first quartile is bigger than third quartile for annuity amount which means most of the annuity clients are from first quartile.

BIVARIATE ANALYSIS FOR TYPE 0

CREDIT AMOUNT VS EDUCATION STATUS

Few points can be concluded from the graph.

- Family status of 'civil marriage', 'marriage' and 'separated' of Academic degree education are having higher number of credits than others.
- Higher education of family status of 'marriage', 'single' and 'civil marriage' are having more outliers.
- Civil marriage for Academic degree is having most of the credits in the third quartile.

INCOME AMOUNT VS EDUCATION STATUS

Few points can be concluded from the graph.

- For Education type 'Higher education' the income amount mean is mostly equal with family status. It does contain many outliers.
- Less outlier are having for Academic degree but they are having the income amount is little higher than Higher education.
- Lower secondary of civil marriage family status are have less income amount than others.

BIVARIATE ANALYSIS FOR TYPE I

CREDIT AMOUNT VS EDUCATION STATUS

Few points can be concluded from the graph.

- Quite similar from Target 0, we can say that Family status of 'civil marriage', 'marriage' and 'separated' of Academic degree education are having higher number of credits than others.
- Most of the outliers are from Education type 'Higher education' and 'Secondary'.
- Civil marriage for Academic degree is having most of the credits in the third quartile.

INCOME AMOUNT VS EDUCATION STATUS

Few points can be concluded from the graph.

- Have some similarity with Target0, From above boxplot for Education type 'Higher education' the income amount is mostly equal with family status.
- Less outlier are having for Academic degree but there income amount is little higher than Higher education.
- Lower secondary are have less income amount than others.

UNIVARIATE ANALYSIS AFTER MERGING PREVIOUS DATA

DISTRIBUTION OF CONTRACT STATUS WITH PURPOSES

Few points can be concluded from the graph.

- Most rejection of loans came from purpose 'repairs'.
- For education purposes we have equal number of approves and rejection
- Paying other loans and buying a new car is having significant higher rejection than approves.

DISTRIBUTION OF PURPOSES WITH TARGET

Few points can be concluded from the graph.

- Loan purposes with 'Repairs' are facing more difficulties in payment on time.
- There are few places where loan payment is significant higher than facing difficulties. They are 'Buying a garage', 'Business development', 'Buying land', 'Buying a new car' and 'Education' Hence we can focus on these purposes for which the client is having for minimal payment difficulties.

PERFORMING BIVARIATE ANALYSIS

PREV CREDIT AMOUNT VS LOAN PURPOSE

From the previous graph we can conclude the below points:

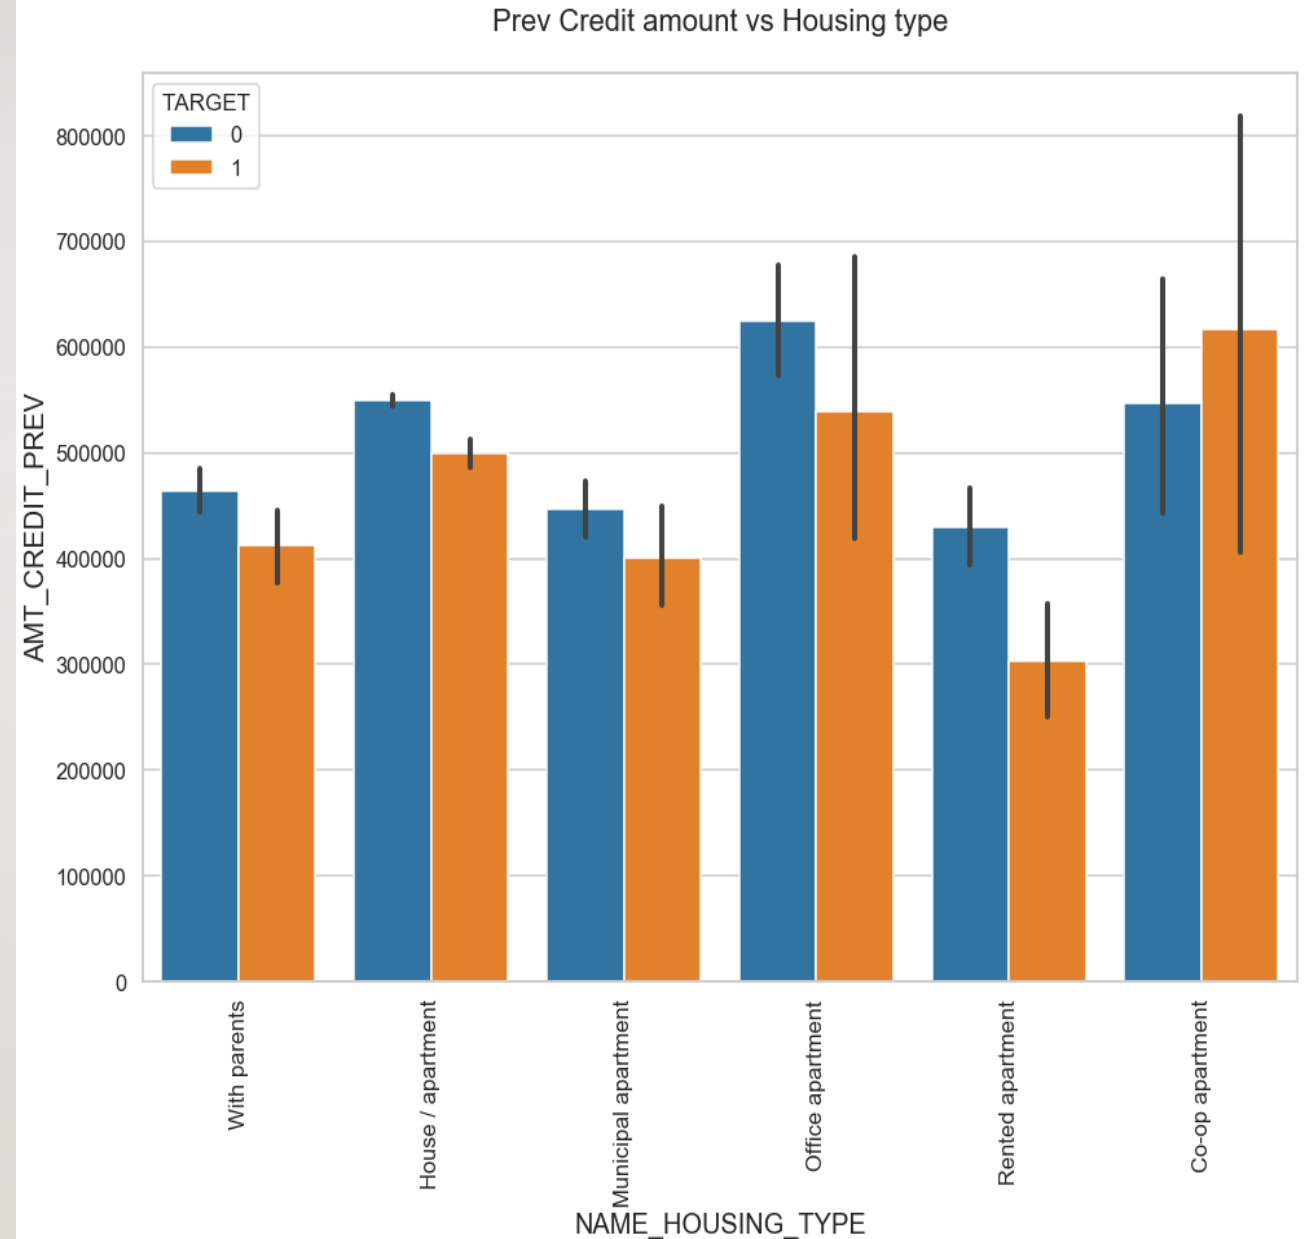

- The credit amount of Loan purposes like 'Buying a home', 'Buying a land', 'Buying a new car' and 'Building a house' is higher.
- Income type of state servants have a significant amount of credit applied
- Money for third person or a Hobby is having less credits applied for.

PREV CREDIT AMOUNT VS HOUSING TYPE

Few points can be concluded from the graph.

- Here for Housing type, office apartment is having higher credit of target 0 and co-op apartment is having higher credit of target 1.
- So, we can conclude that bank should avoid giving loans to the housing type of co-op apartment as they are having difficulties in payment.
- Bank can focus mostly on housing type with parents or House\apartment or municipal apartment for successful payments.

CONCLUSION

- Banks should focus more on contract type 'Student', 'pensioner' and 'Businessman' with housing 'type other than 'Co-op apartment' for successful payments.
- Banks should focus less on income type 'Working' as they are having highest number of unsuccessful payments.
- Also, with loan purpose 'Repair' is having higher number of unsuccessful payments on time.
- Get as much as clients from housing type 'With parents' as they are having least number of unsuccessful payments.

THANK YOU
